Ahmed Ali

AI/ML Engineer · GenAI & Agentic Systems

Building systems where language models retrieve, reason and act.

20M real click events modelled in a session recommender

140K products served live behind the recommender

3 cloud services wired into one live deployment

4 agent frameworks: LangChain, LangGraph, CrewAI, AutoGen

PROFILE

AI/ML engineer who builds the layer between large language models and real systems: retrieval pipelines that ground answers in source data, agents that plan and act across tools, and classical ML models that hold up under scrutiny. Works across the applied-AI stack, from model training and explainability to API-first serving and agent orchestration, and is currently building RAG pipelines and LLM agents in production.

EXPERIENCE

AI/ML Associate Engineer

May 2026 – Present

Yuva Intelli AI Solutions · Hyderabad, India

- Design and build **RAG pipelines** that ground LLM answers in retrieved, structured and vectorised data for production use cases.
- Build **LLM agents** with LangGraph and LangChain that plan, call tools and complete multi-step tasks.
- Own **end-to-end ML workflows**: training, explainability and API-first serving with FastAPI.

Data Scientist Intern

Jan 2025 – May 2026

TechZone Academy

- Applied machine learning and data science across **sequential, classical and vision** models.
- Helped train the next generation of AI/ML engineers.

PROJECTS

Session-Based Recommender System

TensorFlow · FastAPI · Streamlit · React

- Trained a **GRU4Rec** sequential model on **20M real e-commerce click events** to predict a visitor's next item from their last few clicks, with no login required.
- Served predictions through a **FastAPI** backend behind a React storefront of ~140K real products, plus a Streamlit app for live exploration.
- Deployed live across three services: Vercel (frontend), Render (API and model) and Aiven (database).

Agentic Conference Registration Bot

Team project

Serper API · Playwright · Headless Browsers

- Built, with a team, an **autonomous agent** that searches for relevant conferences and completes registration without human input.
- Drove headless browsers through real-world signup flows.

Portfolio with a Live RAG Assistant

React · FastAPI · scikit-learn · OpenRouter · github.com/ahmedali-aihub/Portfolio

- Built a **retrieval-augmented** chat assistant: TF-IDF retrieval over a curated knowledge base, streamed to the browser over Server-Sent Events.
- Added automatic fallback across an ordered chain of free-tier LLMs so answers keep flowing when a model is unavailable.

SKILLS

Agentic AI & LLMs

LangChain · LangGraph · CrewAI · AutoGen · MCP Servers · Prompt Engineering · Hugging Face · Anthropic · OpenRouter

RAG & Search

RAG · Vector Databases · FAISS · TF-IDF

ML & Modeling

Python · NumPy · Pandas · TensorFlow · Keras · PyTorch · Scikit-learn · NLP · SHAP · Jupyter

LLM Engineering

Transformers · Ollama · vLLM · LangSmith · LLM Evals · Guardrails · LoRA · RLHF

Backend & Tools

FastAPI · REST APIs · Streamlit · Docker · MySQL · Playwright · Selenium · Git · GitHub Actions · Linux

FOCUS AREAS

- Agentic AI systems
- RAG & retrieval pipelines
- Applied machine learning
- Computer vision
- Production ML infrastructure
