Summary

AI/ML engineer specialising in RAG pipelines, agentic LLM systems and production ML services, built with Python, FastAPI, LangChain and LangGraph. Currently an AI/ML Associate Engineer at Yuva Intelli AI Solutions, shipping AI assistants, RAG systems and NLP features, while completing a Bachelor's degree in AI & Machine Learning (2025–2028). Focused on AI that stays trustworthy: agents that score their own evidence and escalate instead of guessing, backed by evaluation, explainability and API-first serving. Active in AI communities and hackathons.

Education

Shadan College of Engineering and Technology Jul 2025 – Jun 2028 (expected)
Bachelor's degree, AI & Machine Learning

Jawaharlal Nehru Government Polytechnic College Aug 2022 – May 2025
Diploma, Mechanical Engineering

Experience

AI/ML Associate Engineer Jul 2025 – Present
Yuva Intelli AI Solutions *Nampally, Telangana*

- Build AI assistants and RAG systems with Python, FastAPI, LangChain, Ollama and vector databases.
- Develop LLM agents and NLP solutions, plus face-recognition and speech-recognition features.
- Own ML workflows end to end, from training and explainability to API-first serving.

Data Scientist Intern Jan 2025 – Jun 2025
TechZone Academy *Hyderabad*

- Performed data preprocessing, exploratory analysis, model building and predictive analytics.
- Used Python, Pandas, NumPy and Scikit-learn with mentors and teams on ML, NLP and automation work.

Projects

Agentic RAG Support Assistant | *LangGraph, FastAPI, Chroma, React, TypeScript* GitHub

- Built a LangGraph support agent that judges whether retrieved evidence answers a question, then replies with a citation, rewrites the query once, or escalates to a human with a triage summary.
- Two-stage retrieval (Chroma, then cross-encoder reranking of 20 candidates to the top 5); on an 11-question eval it cut hallucinated out-of-scope answers from 2/5 to 0/5 while still answering all 6 in-scope questions.
- Added a human-in-the-loop ticket queue whose resolved answers are embedded back into the knowledge base; shipped with 81 automated tests, CI and Docker.

Session-Based Recommender System | *TensorFlow, FastAPI, Streamlit, React* GitHub

- Trained a GRU4Rec model on 20M real e-commerce click events to predict each visitor's next item.
- Served via FastAPI behind a React storefront of ~140K products; deployed on Vercel, Render and Aiven.

Agentic Conference Registration Bot | *Serper API, Playwright, Headless Browsers*

- Team-built agent that finds relevant conferences and completes registration autonomously via headless browsers.

Technical Skills

Agentic AI & LLMs: AI Agents, LangChain, LangGraph, CrewAI, AutoGen, MCP Servers, Prompt Engineering, Hugging Face, Anthropic, OpenRouter

RAG & Search: RAG, Vector DBs, FAISS, TF-IDF

ML & Modeling: Python, NumPy, Pandas, TensorFlow, Keras, PyTorch, Scikit-learn, NLP, SHAP, Statistics, Data Science, Jupyter

LLM Engineering: Transformers, Ollama, vLLM, LangSmith, LLM Evals, Guardrails, LoRA, RLHF

Backend & Tools: FastAPI, REST APIs, Streamlit, Docker, MySQL, SQLAlchemy, Playwright, Selenium, Git, GitHub Actions, Linux
